JUNIOR SECURITY ANALYST INTRO REPORT

Introduction

In this module, I explored the role of a Junior Security Analyst and gained an understanding of how SOC teams operate to defend organizations against cyber threats. I learned the importance of staying alert, working in a team, and continuously improving my skills in a fast-paced environment.

1.0 Junior Security Analyst Journey

I learned that cybersecurity is a constantly evolving field where attackers are always finding new ways to breach systems, making defenders like Junior Security Analysts essential. My role involves being the first line of defense; monitoring alerts, investigating threats, and helping protect my organization from real-world cyber attacks. I also learned that working in a SOC is a continuous learning process, requiring teamwork, collaboration, and staying updated with the latest threats and defense strategies.

Question: What team do you work with as a Junior Security Analyst?

Answer: SOC

2.0 Security Operations Officer

I learned that a SOC is a team effort, where different roles like analysts, engineers, managers, and incident responders work together to protect the company. I also understood that as a Junior Analyst, I handle initial investigations while learning from others and gaining experience to deal with more advanced threats over time.

3.0 A Day I the Life of a Security Analyst

I learned that a Security Analyst's day involves handling many alerts and tasks under pressure, requiring constant learning and quick responses. I also learned that the role is

rewarding, especially when I successfully stop real threats and understand how real-world attacks happen.

Question1: What was the malicious IP address in the alert?

Answer: **221.181.185.159**

The screenshot shows a web application interface for a SOC Analyst. The left panel contains a task description and a quiz question. The right panel shows the 'IP Hunter' tool results for the IP address 221.181.185.159.

Room progress (83%)

Being in the defensive routine is not easy, as you have to constantly learn new things. During a busy 8-hour shift, you might be buried under a mountain of "tickets" - the alerts and tasks that you need to resolve in a timely manner. Still, the job is fun and rewarding, especially after you stop a real threat from damaging your organization. Even better, it is fascinating to know how the attacks you hear about in the news actually happen in the real world.

Now, are you ready to immerse yourself in the role of a Security Analyst? Click on the green **View Site** button above to open the attached lab. Navigate to the alert dashboard on the right and answer the questions.

Answer the questions below

Click on the green **View Site** button in this task and open the lab.

No answer needed

✓ Correct Answer

What was the malicious IP address in the alerts?

221.181.185.159

✓ Correct Answer

From whom did you escalate the alert with the malicious IP?

IP Hunter
Check by IP Address

There are many open-source databases out there, like AbuseIPDB, and Cisco Talos Intelligence, where you can perform a reputation and location check for the IP address. Most security analysts use these tools to aid them with alert investigations. You can also make the Internet safer by reporting the malicious IPs, for example, on AbuseIPDB.

Now that we know the IP address is malicious, we need to escalate it to a staff member!

221.181.185.159 was found in our database!

Malicious - Involved in 4 Cyber Attacks

Attribute	Value
ISP	China Mobile Communications Corporation
Domain Name	chinamobile.thm
Country	China
Categories	Port Scan, C2 Server, PlugX

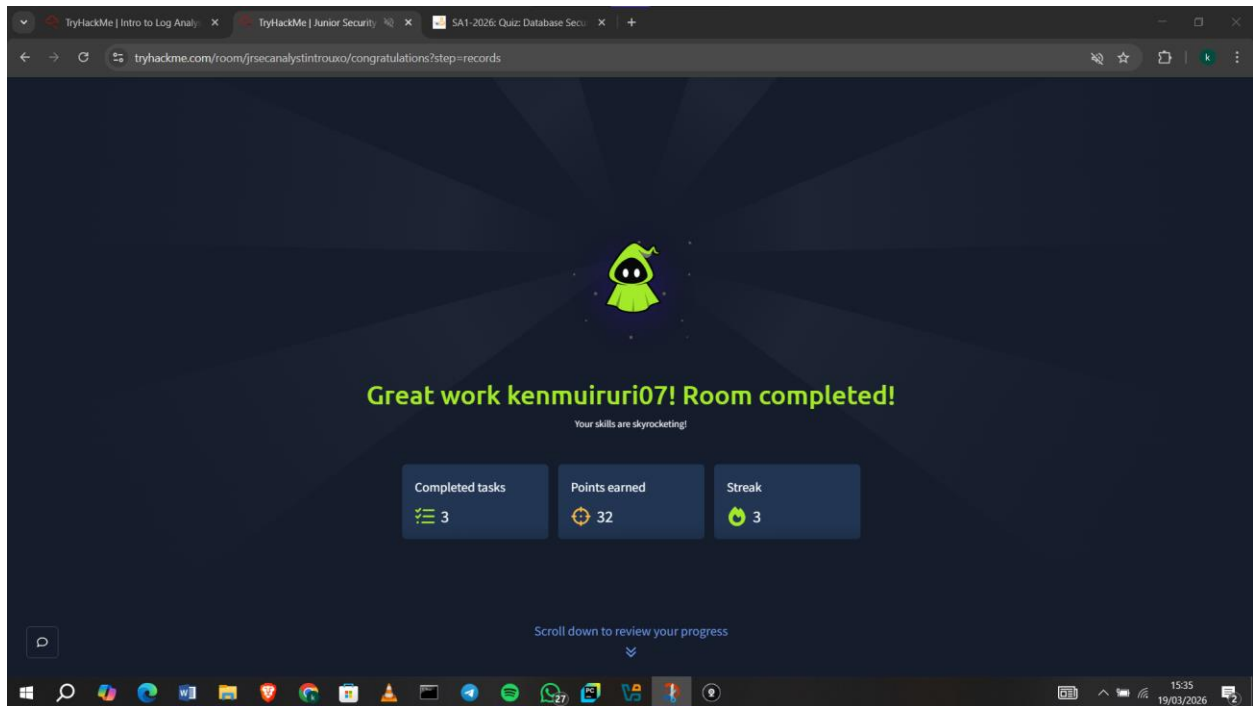

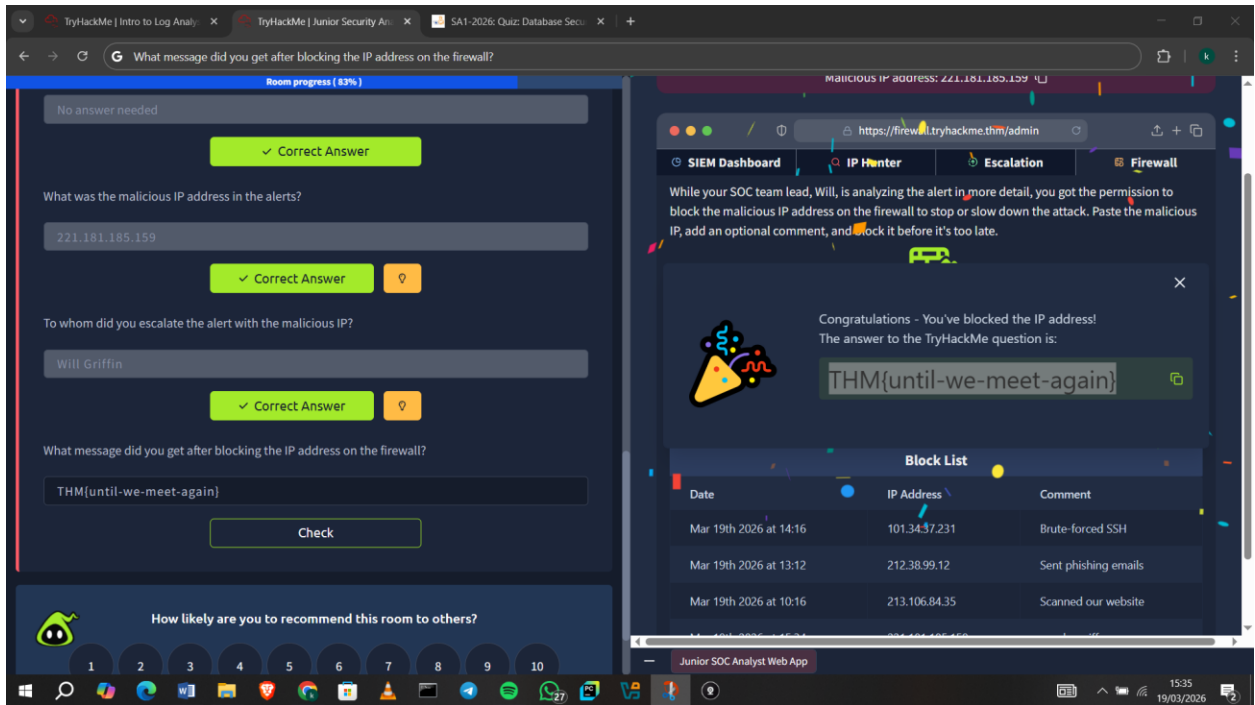

Junior SOC Analyst Web App

Question2: To whom did you escalate the alert with the malicious IP?

Answer: **Will Griffin**, the Senior Analyst

Question3: What message did you get after blocking the IP address on the firewall?

Answer: **THM{until-we-meet-again}**

Conclusion

Overall, the module helped me understand the responsibilities, challenges, and growth opportunities in a SOC role.
